需求描述

```
class TravelInfo{
       private Long depTime;
       private String depCode;
       private String arrCode;
       private String company;
 7 出发:北京
 8 到达 上海
   出发时间: 2023-06-11
10 航司: CA
11 class Config{
12
       private Boolean mustBeforeDepTime;
13
       private List<String> depCodes;
14
       private List<String> arrCodes;
15
       private String company;
       private String configInfo;
17 }
18
19
20
       {true,[北京,上海,南京],[南京,天津],MU, "AAAAAAAA"}
21 2:
       {false,[上海],[乌鲁木齐],CA,"BBBBBBB"}
22
23
       {false,[北京],[上海,杭州],CA,"CCCCCCC"}
24
25
26
   实现方法找出正确的Config输出configInfo
   public String findConfig(TravelInfo t, List<Config> configs){
27
28
29 }
```

实现方案

依次校验条件是否满足

- 时间 (待确认)
- 出发地点
- 目的地点
- 航空公司编码

如果存在返回其中的一个,不存在抛出异常

```
1 package com.wy;
   import cn.hutool.core.date.DateUtil;
   import lombok.Data;
   import java.util.List;
   public class Temp {
       public String findConfig(TravelInfo travelInfo, List<Config>
   configs) {
           return configs.stream()
10
11
                   // todo 不理解config.mustBeforeDepTime 的具体含义。必须在出
   发时间之前提前预定吗?
12
                    .filter(config -> config.getMustBeforeDepTime() &&
   DateUtil.current() > travelInfo.getDepTime())
13
                    .filter(config ->
   config.getDepCodes().contains(travelInfo.getDepCode()))
14
                    .filter(config ->
   config.getArrCodes().contains(travelInfo.getArrCode()))
15
                    .filter(config ->
   config.getCompany().equals(travelInfo.getCompany()))
                    .findFirst()
17
                    .orElseThrow(() -> new RuntimeException("no config
   found"))
18
                    .getConfigInfo();
```

```
19
20
21 }
22
   @Data
   class TravelInfo{
23
        private Long depTime;
24
        private String depCode;
25
        private String arrCode;
26
        private String company;
27
29
30 @Data
   class Config{
31
32
        private Boolean mustBeforeDepTime;
        private List<String> depCodes;
33
        private List<String> arrCodes;
34
        private String company;
35
        private String configInfo;
```
